

Excel for Accounting and Inventory Reporting

(Automate calculations and reduce errors in daily reporting)

Overview

This course uses an artifact sequence approach in which participants build a complete, formula-driven accounting and inventory workbook across five topic blocks. Participants import a live dataset from the web, then structure it as an Excel Table, automate recurring calculations, cross-reference records across a second table, summarize results using a Pivot Table, and present the completed workbook as a professional, protected report ready for distribution.

Objectives

Upon completion of the course, participants will be able to build a formula-driven, error-resistant Excel workbook for accounting and inventory reporting.

Specifically, participants will be able to:

- organize imported data as a structured Excel Table with calculated columns
- automate recurring calculations using IF, SUMIFS, COUNTIFS, and IFERROR
- cross-reference records across tables using lookup functions and data validation
- summarize data using a Pivot Table and present it visually with a chart

Who Should Participate

- Assistant to Managerial-level staff who prepare accounting and inventory reports.
- Employees who use Excel daily for reporting and want to work more efficiently.
- Staff who rely on manual re-typing or unstructured ranges for reporting.

Key Topics

- I. Structuring Source Data as Excel Tables
 - a. Converting a range to Table via Insert → Table
 - b. Using table column references in formulas
 - c. Renaming and organizing worksheets and tables
 - d. Applying formatting for report presentation
- II. Automating Everyday Calculations
 - a. Reviewing SUM, AVERAGE, COUNT, and COUNTA
 - b. Using IF to flag stock and payment status
 - c. Using SUMIFS and COUNTIFS for conditional sums
 - d. Using IFERROR and Formulas → Formula Auditing
- III. Cross-Referencing Data Across Tables
 - a. Matching records using VLOOKUP and XLOOKUP
 - b. Dropdown lists via Data → Data Validation
 - c. Sorting and filtering via Sort and AutoFilter
 - d. Converting query-connected tables to ranges
- IV. Summarizing Data with Pivot Tables
 - a. Building a Pivot Table via Insert → PivotTable
 - b. Organizing fields into Rows and Columns
 - c. Placing numeric fields into Values area
 - d. Using the Filters area to narrow the report
- V. Presenting Data Visually
 - a. Creating a chart via Insert → Charts
 - b. Choosing the right chart type for the data
 - c. Formatting chart elements for report clarity
 - d. Protecting the sheet via Review → Protect Sheet
